Subject: CORRECTED BDCP Briefing Paper

Jared –

Erin Foresman caught an error in the BDCP briefing paper that was sent to you earlier today. The first bullet indicated that the BDCP would result in diminished freshwater flows through the Delta. While the Proposed Action and several of the alternatives would result in diminished flows, not all of them would. There is at least one alternative that would increase the flows, but not significantly. Since EPA's position is that significant increases in freshwater flows through the Delta are needed, they all fall short. We have also corrected one of the sub-bullets of the first bullet by replacing the reference to "tunnels" with "conveyance", since one of the alternatives proposes an isolated channel, rather than tunnels.

Attached is a corrected version of the briefing paper. Please use this one instead of the earlier version.

Sorry we didn't catch this sooner.

-Kathy
